

Modification as at release 11.00.07a

- 1) We have fixed a bug in the profile configuration form. When matter types were being removed, Synergy was deleting all matter profiles for all matter types rather than the selected matter type in the profile form. This has been fixed.

- 2) The matter creation and scanning button from the Work Centre, Matter Control Centre and Client Control Centre was not working. We have fixed this on this release. Please note that the V11.00.07a package that was issued 12th of August 2016 does not contain this fix. The fix is only included in V11.00.07a package issued on 16th of October 2016. Please use <http://www.stsynergy.com/media/stsynergyreleases.asp> to download and install the new V11.00.07a package.
